***6275 Nine Mile Road
Warren, Michigan 48091***

The facility is located at 6275 Nine Mile Road in the city of Warren, Macomb County, Michigan on approximately 124 acres. It was developed in 1941 by the United States Navy and the Hudson Motors Car Company as a Naval Ordnance Plant. Upon completion of initial construction, the site consisted of 16 separate structures encompassing slightly more than 1,000,000 square feet of floor space.

During World War II, Hudson Motor Company and later Westinghouse, operated the Plant until 1946, when military production stopped and the facility was purchased by Ford Motor Company. Ford produced axles and ball joint front suspensions and ceased production in 1957. General Motors Corporation's (GMC's) Chevrolet Motor Division purchased the facility in 1960. General Motors LLC purchased the facility in 2009. GM LLC continues to produce transmissions and transmission component at the facility.

The facility has been ISO-14001 certified since 1999. In 2005 the site became ISO 14001 certified under the new standard ISO: 2004 and is designated as Clean Corporate Citizen (C3) and Michigan Business Pollution Prevention Partnership (MBP3) since 2000. Wildlife Habitat Certification since 2007 and Neighborhood Environmental Partners (NEP) since 2006. The site has been partnering with the Clinton River Watershed Council, the Detroit Manufacturing Partnership School, Southfield Public Schools, St. Ann Catholic School and Guardian Angels in Clawson in doing water sampling and Earth Day activities every year as our NEP award project.
